

Understanding Consumer Attitudes Toward

Sustainable Fashion Consumption

Alina Beaman, Alice Stessman, Valérie Ding

Introduction

Introduction

- Increasing attention towards sustainability practices, consumer behavior, fashion industry
- Limited research examining frequent consumer demographic: college students
- **Research gap & objective:** constructing more holistic understanding of consumer psyche in UCLA student demographic

Research Question

How do demographics impact perspectives and buying behavior in relation to sustainable fashion?

Data

Data

 UCLA-wide distributed questionnaire: n = 129

 Key information:

- Demographic data: gender, religious affiliation, field of study, extracurricular interests, race, geographics, year, fashion consumption patterns
- Consumer attitudes about individual impact, political action, environmental concerns, necessity of sustainability, consumption habits

Data cont.

Variables & Pre-Processing

- Demographic clustering: race, religious affiliation, political affiliation
 - Proportions per group representations
- Consumer attitudes clustering: classify responses to each question as sustainability-optimistic or sustainability-neutral → question_direction

Methods

Analysis

♻️ Conduct k-means clustering based on survey responses → can we accurately identify, characterize, and determine attitudes towards sustainability given other demographic variables?

♻️ Tools:

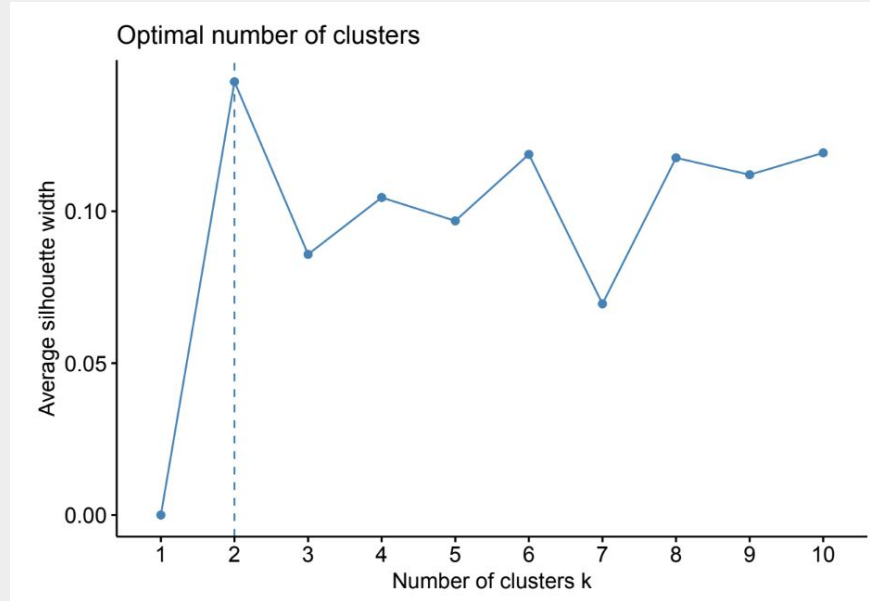

→ packages: cluster, factoextra, dendextend, NBClust, GGally

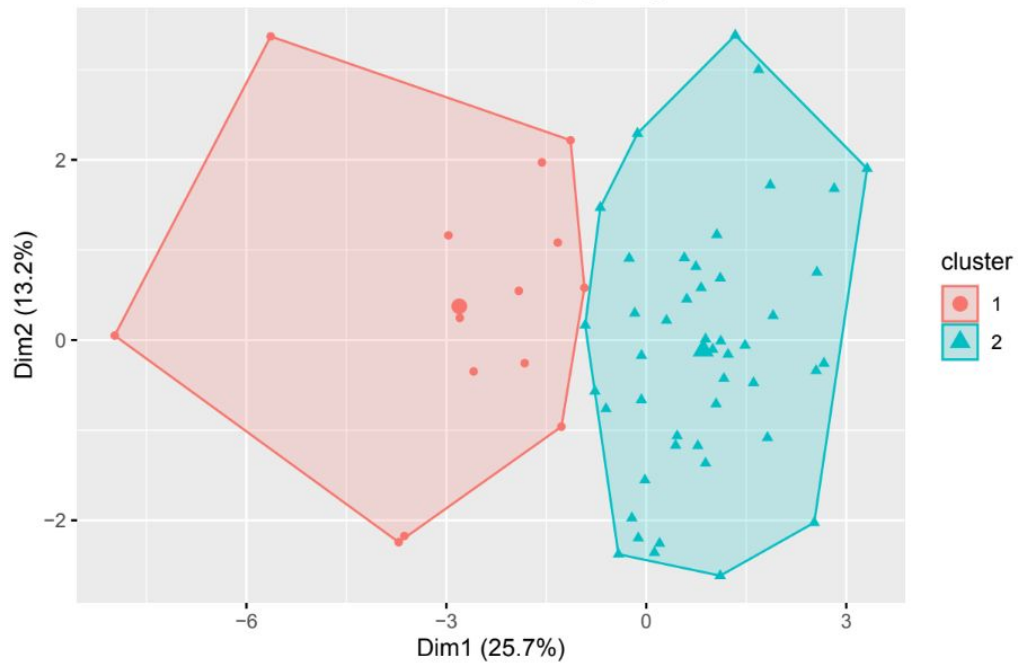

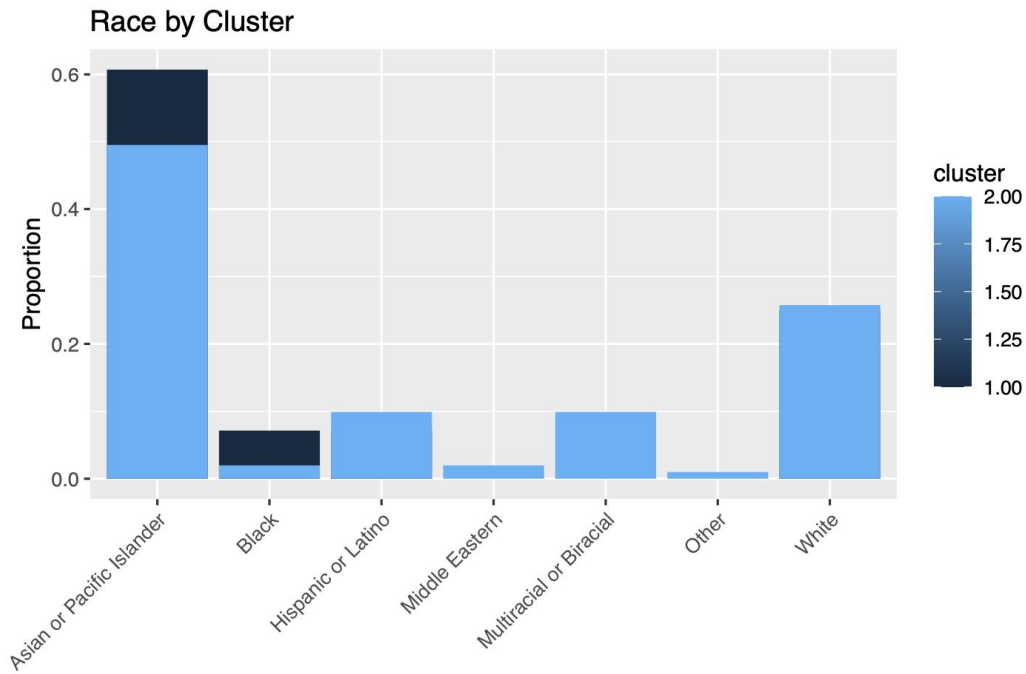

Results & Interpretation

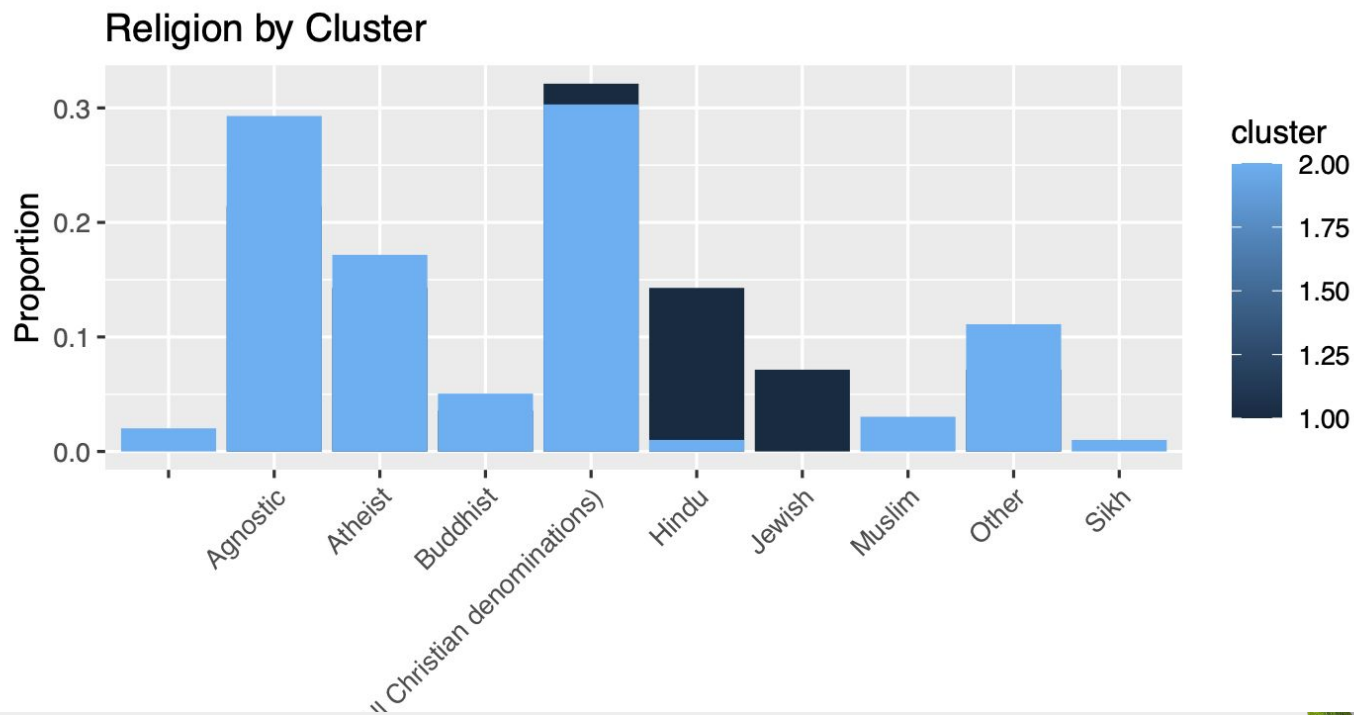

Results

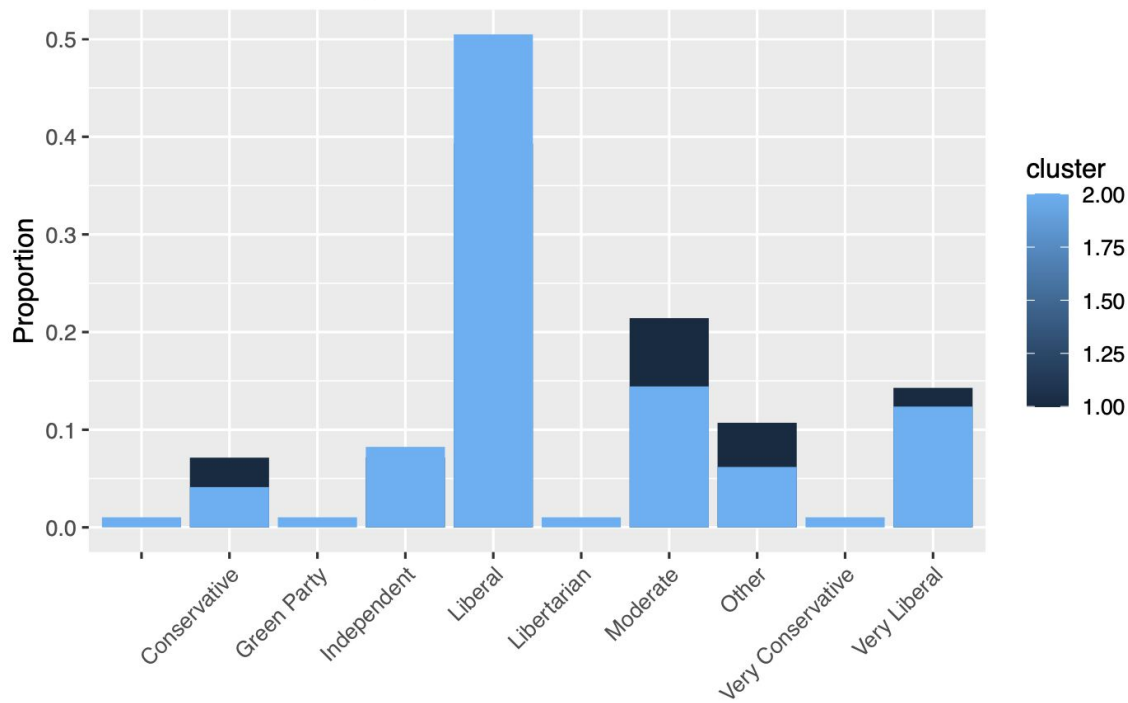

Student Clusters Based on Sustainability Responses

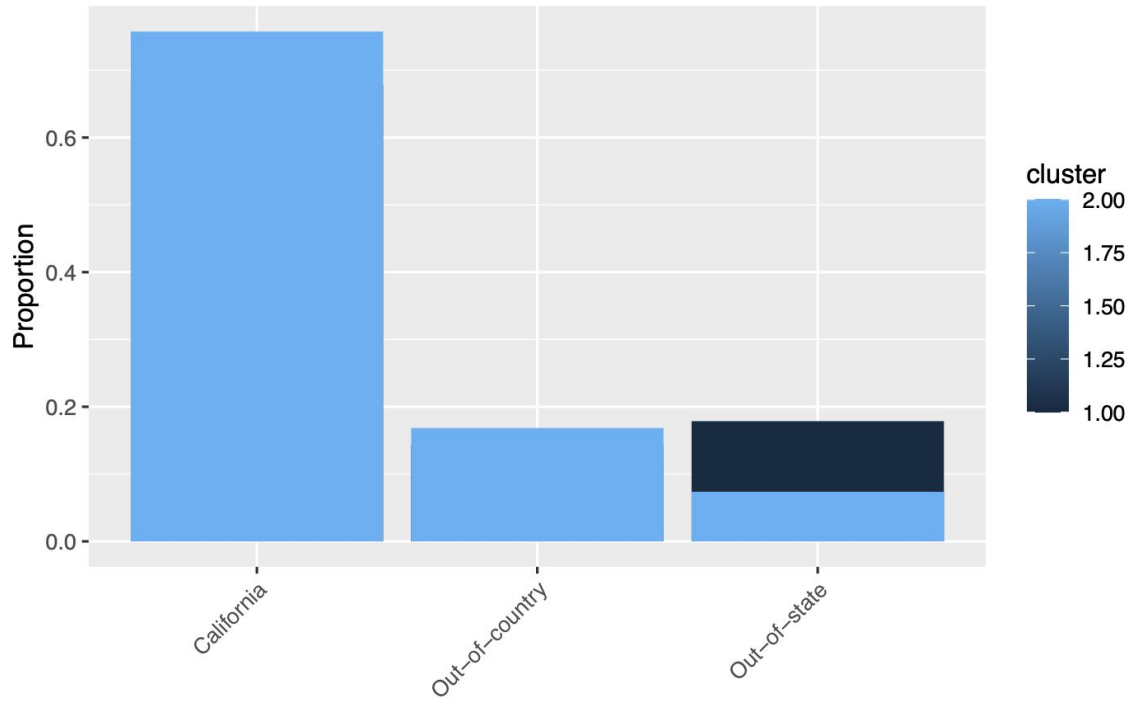

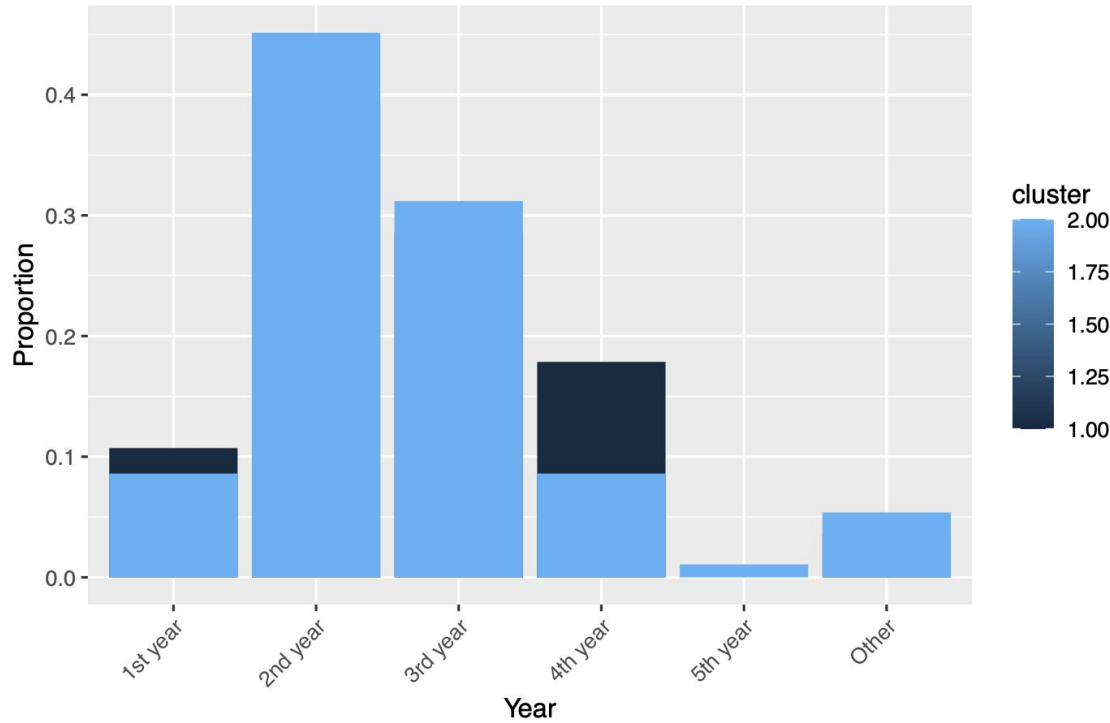

Political Affiliation by Cluster

Residency by Cluster

Year by Cluster

Significance

- Dataset for the data community
- Applied to examine other single-issue patterns

thank you!
